

DDoS Mitigation Service

Providing DDoS Protection for your business

Distributed Denial of Service (DDoS) attacks can be lethal, with the ability to take down services and business websites, and they are on the increase by over 100% year on year.

We protect your business with our DDoS Mitigation Service, and ensure that your data and infrastructure is safe at all times.

In our modern times, what business doesn't rely on the Internet? Whether you're an eCommerce retailer, social networking platform or simply look to your online presence to attract your new customers – it's a key requirement for every business. The sad news, however, is that the very thing we all rely on, the Internet, is now the biggest threat to businesses today - meaning IT security is required more now than ever.

With 85% of previously attacked organisations subjected to multiple DDoS strikes and 53% of attacked organisations breached as the result of a DDoS attack, these shocking statistics prove that DDoS attacks are persistent, relentless and something that every business needs to protect themselves from.

Thankfully we offer services that assist in halting the impact of attacks such as these, with its DDoS Mitigation Services. Unlike other services on the market, we are able to proactively protect your Network; our 24 / 7 x 365 UK based customer support centre understands your Network profile and the typical traffic that is to be expected, meaning that they can identify an attack sooner rather than later.

We are also able to provide you access to view traffic trends, types and volumes in real time for reporting purposes, allowing you to understand your Network at all times - even when it is in trusted hands.

Whilst our primary service allows for two managed assets and covers attacks up to 10Gbps, covered by a standard annual service fee, we are able to tailor our DDoS Mitigation Services to your company's specific needs, and a full bespoke service if required by your business.

Ensure that your business is automatically protected against threats, with just some basic details about your Network we can configure the service specifically for you and ensure your assets are protected at all times.

DDOS MITIGATION FEATURES

- Automatic “always on” monitoring of your internet traffic.
- A real time view of your internet traffic, traffic type and volumes.
- Access to generating reports from the platform.
- The Ability to have a specific protection profile for your critical network facing assets.
- Network protection from DDoS attack, based on global information which means quicker identification of bad traffic.
- Best of breed solution using tried and tested technology from the market leader.

DDOS MITIGATION BENEFITS

- You have an additional layer of valuable security and protection in place.
- You don't have to change your Firewalls, policies or the experience of your users.
- You will immediately have the benefit of protection from known bad IP traffic.
- You will be able to see and understand your own traffic patterns and types via a service portal.
- You will be making a conscious decision about anticipating a Cyber Security attack.
- You will gain information to make decisions about your traffic profile.
- You don't need to learn new skills or look to change suppliers.
