

MOBILEIRON FACT SHEET

What is MobileIron?

It's a Mobile Device Management platform that works across any device or network – for IOS, Android, Mac OS and Windows. It lets IT Admins control and secure content on devices, and even deploy different configurations and policies to enforce them.

What are the benefits of MobileIron?

- It helps businesses be more productive by letting their workforce use mobile devices securely.
- It lets the company secure and control their mobile device fleet to reduce risks.
- It lets gives users a chance to have separate personal and mobile apps on their devices.
- It lets admins push business apps to users.
- It lets admins locate, lock and wipe devices remotely if they're lost or stolen.
- It gives users controlled access to office resources.

What are the key features of MobileIron?

- A 24/7 admin portal for creating users and controlling and configuring policies.
- Lets an IT Admin set up organisational groups with different policies and controls.
- Integration with active directory using connector.
- Provides mobile users with secure access to corporate email via Sentry.
- Provides mobile users with secure access to document repositories or SharePoint using Sentry.
- Gives IT Admin the ability to manage both bring your own (BYO) and company owned devices.
- Provides an encrypted secure container for emails, attachments and other corporate data.
- Creates per app VPN tunnels to encrypt data in transit back to the office environment.
- Ability to integrate with Android Zero Touch and Apple DEP.
- Certificate based authentication – single sign-in giving access to all company specific apps: Allowing MobileIron to talk directly to internal and external authorities to establish trusted relationship within environment.
- Gives IT Admins the ability to remotely connect to mobile devices to assist users with issues.

EE MOBILEIRON FACT SHEET

What are the components of MobileIron?

MobileIron has a client server architecture that includes:

- **MobileIron Cloud or MobileIron Core:** Software engine based in the cloud or on premise.
- **Mobile@Work or MobileIron Go:** Client installed on mobile that configures the device to work with the software engine.
- **MobileIron Management Console:** A single console that allows IT Admins to configure and manage their mobile devices.
- **Sentry:** A range of gateways that encrypt and route traffic between mobile devices and IT systems.
- **MobileIron Secure Apps:** A number of client apps (Email+, Web@Work, Docs@Work....) that help users be more productive by allowing secure access to corporate resources and content.

What are MobileIron deployment options?

We can deploy MobileIron as a cloud based solution or installed on a customer's premises. The additional benefits of an on premise solution is that it gives a company's IT Admin full control and management of the service. They can determine the security level of the platform and the control of upgrades and patches. These features may be suitable for a company with strict security requirements i.e. Central Government Agencies, Health Service.

What is EE Super Secure?

An EE bundle that combines a MobileIron licence with a specific 4GEE Data Plan.

It comes with three options:

- Super Secure Starter: MobileIron Bronze license
- Super Secure Enterprise: MobileIron Silver license
- Super Secure Enterprise Plus: MobileIron Gold or Platinum license

And the following benefits:

- One monthly standard fee
- A choice of shared or single data plans
- It's cheaper than buying each part separately

Cost Considerations

The flexibility of MobileIron's architecture acts as building blocks which means that as a business grows, it's easy to add other components to meet their changing needs.
