Improve your mobile security

Vodafone Secure Net is our web security product for mobile smart devices and mobile broadband, ensuring your business is ready to be more productive and work more securely. It provides effective, vital protection for your employees against viruses, malware and phishing when they browse the Internet via the Vodafone mobile network, using their smart devices.

Mobile malware is increasingly sophisticated. It's now using techniques encountered in PC-based malware, such as seeking anti-virus protection on mobile devices, and disabling it. Vodafone Secure Net protects against this, and more.

Vodafone Secure Net has significant advantages over device-based security solutions. As the protection sits in Vodafone's core network, there's nothing for you to install or manage. It also eliminates the risk that some users will fail to implement or update the protection, creating a weak point

> ❞

that's vulnerable to virus or malware attacks. Anti-virus and anti-malware solutions also require memory and processing power, so they impact on device performance. And as they vary for each operating system and require on-going management, they add to the workload for IT managers.

With Vodafone Secure Net, it's much simpler. As long as the user has a Vodafone business SIM and connects via the Vodafone mobile network, they benefit from our device agnostic protection, which we update constantly to counter any emerging threats.

Key features

- Automatic protection for smart devices connecting via a Vodafone business SIM to the Vodafone mobile network.

- Vodafone's mobile network protects against viruses, malware and malicious web sites when browsing the Internet using non-encrypted communication (http).

- Protects against threats distributed via emails (Webmail and POP/IMAP)

- Deployed in the Vodafone mobile network, so IT managers don't need to manage any hardware, software or upgrades.

- No need to worry about whether devices are protected by proprietary anti-virus or anti-malware software, or whether it's up to date.

- No impact on device performance.

Feature	What it means for you
Protects any smart device using a Vodafone business SIM	Automatic, effective anti-virus, anti-phishing and anti-malware protection for your employees whenever they connect via Vodafone.
Deployed in the Vodafone core network	There's nothing to install on your smart devices, their performance and memory capacity are unaffected.
Protects against threats embedded in emails and files	Safeguards your business security, productivity and continuity.
Compatible with all operating systems	No need to deploy different solutions for different operating systems.
Complements MDM platforms	Vodafone Secure Net provides protection against web threats and blocks them. MDM takes care of your mobile device configuration and policies.
Managed and updated by Vodafone	Does not impact IT manager's workload — no need to worry about installing or managing hardware, software or updates, or whether a user has installed or updated protection.
Compatible with any tariff	Service can be added to all Enterprise tariffs so you can be secure whatever plan you're on.
