

The SOTI logo is displayed in white, bold, sans-serif capital letters on a dark blue rectangular background. A registered trademark symbol (®) is located to the right of the 'I'.

ENTERPRISE MOBILITY MANAGEMENT

Taking Mobility to Endless Possibilities

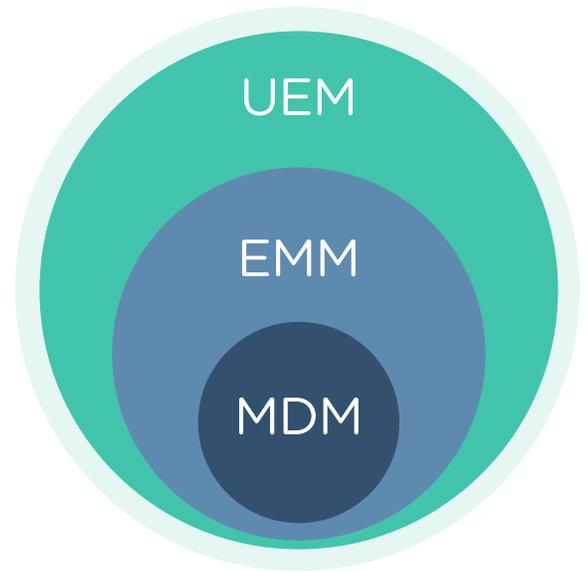

The background of the advertisement features a close-up of a person's hand holding a smartphone. Overlaid on the phone and the person's face are various digital and futuristic elements, including a circular interface with concentric lines, a data dashboard with charts and graphs, a world map, and a glowing blue light effect. The overall aesthetic is clean, modern, and tech-oriented.

Mobility is changing the world, enabling immediate access to everything. Give your workers the tools they need to do anything, anywhere and anytime - and then watch your company succeed beyond your wildest expectations. SOTI manages your whole mobile enterprise - devices, apps, content and security. We take care of mobility, so you can take your business to endless possibilities.

Extend Mobility Across your Entire Business

More mobile workers, new types, makes and models of devices, more capable devices, and lots of mobile applications and content drove the evolution of mobility management. The Internet of Things will further increase the management challenge as experts predict as many as 25 billion 'things' will be in use by 2020.

From yesterday's Mobile Device Management (MDM) through today's Enterprise Mobility Management (EMM) to tomorrow's Unified Endpoint Management (UEM), SOTI makes it easy to manage endpoints, 'things' and devices, and their applications, content and security.

Mobility across your Entire Business

Every business is different and each business should have its own business mobility strategy that is updated regularly. It doesn't matter who is using what type, make or model of device, how it is being used and what applications and content are allowed or required. SOTI delivers a flexible and scalable mobility management solution that can accommodate all of your business mobility needs today, and into the future.

Advanced Mobility Management

Express Enrollment

Automatically deliver over-the-air device settings for email, WiFi, VPN, content and enterprise applications based on user, role, location, device properties and custom attributes/data.

Remote Control

SOTI provides live, real-time remote support with the fastest, most reliable remote view, remote control and file explorer for Android and Windows devices. Remote view and advanced device management is available for iOS devices.

Rapid Staging and Provisioning

SOTI rapid provisioning with MobiControl Stage gets mobile devices into the hands of your employees sooner, with less IT time and effort.

Management of Smart Peripherals and IoT Endpoints

SOTI offers the industry's tightest integration with connected printers and other IoT endpoints, minimizing downtime with the ability to provision, manage and support new devices remotely.

Mobile Content Management

SOTI provides two options to deliver secure content anywhere and anytime; SOTI hub (app-based) and SOTI's Secure Content Library (MobiControl agent-based). Both options include simplified configuration, flexible policy management and robust security.

Advanced Security Management

Configurable lockdown policies with Kiosk Mode allow administrators to block use of the operating system by replacing the device home screen with a customizable screen that limits users to select applications only. And if a device is lost or stolen, IT Admins, or even the user can locate, lock, or wipe the device.

SOTI Makes it Easy

We manage mobile devices and their applications, content and security. It doesn't matter what make, model or operating system, SOTI takes the complexity out of mobility management.

SOTI Android™ + Technology

As an example of industry leadership, SOTI collaborated with key device hardware manufacturers to develop Android+. This was an industry first - harmonizing device management features and unifying policies across multiple manufacturers. SOTI has developed strong partnerships with over 70 leading Android OEMs to deliver a consistent device management framework and help reduce Android fragmentation.

Android for Work

Android for Work (AfW) is Google's EMM platform that enables the development of managed, secure business applications. Android for Work powered by SOTI provides a dedicated workspace with full OS-level encryption to securely separate business and personal data and applications on Android tablets and smartphones. Containerization lets personal data stay private, and corporate data remains secure.

Apple® iOS Device Enrollment Program

SOTI support for Apple's Device Enrollment Program (DEP) makes it easy for IT administrators to streamline large deployments of iOS devices. Upon enrollment, each device is automatically configured with the required account settings, apps, proxies and VPN settings. You will save money by minimizing downtime with the ability to easily manage device profiles and new devices remotely.

Samsung™ KNOX

Samsung KNOX and SOTI help IT admin manage personal and corporate content on Samsung mobile devices. Samsung KNOX protects the company and the employee by containerizing at the Android operating system (OS) level. It creates an encrypted, authenticated workspace that can be managed separately from the user's personal space. Containerization makes it easy for corporate IT to manage the policies of the work container without taking away the users control and access to their personal applications and files.

Windows 10®

SOTI has been managing all versions of Windows devices since they first debuted in 1996. We were the first to provide device management for rugged Windows CE devices, and today we are an industry leader for the mobility management of all Windows devices, including Windows 10. SOTI takes advantage of Windows 10's expanded palette of MDM capabilities to deliver industry-leading EMM solution for all Windows devices; smartphones, tablets, laptops and desktop computers. It is the EMM solution of choice to optimize efficiency and take charge of your Windows business mobility deployment.

SOTI is a proven innovator and UEM industry leader. Over 16,000 companies globally rely on SOTI for their diverse mobility management needs to fuel differentiation and take mobility to endless possibilities.
